Allison Freitas

Software Engineer — Backend, APIs & Automation

Brazil (open to relocation) | allisonfreitass@gmail.com | linkedin.com/in/allisonfreittass
github.com/Allisonfreittass | allisonfreittass.github.io

SUMMARY

Full-stack software engineer with production experience building web applications, public REST APIs, webhook-based integrations, and AI-powered automation. Strong on backend architecture (Node.js, layered services, authentication), cloud deployment (Cloudflare), and integrating LLMs and third-party systems into real products. Works daily in English within Git-based team workflows.

EXPERIENCE

Full-Stack Engineer Mar 2025 – Present
F2 Tecnologia *Brazil*

- Build and maintain production web applications end to end using Node.js and React, contributing across backend services, REST APIs, and data-driven dashboards.
- Own and maintain two production REST APIs (hosted on Hostinger), including public-facing endpoints and webhook integrations connecting the platform to external systems such as ERPs, with authentication and production-grade error handling.
- Deploy and operate applications on Cloudflare, using Workers for serverless backend logic and Pages for front-end delivery.
- Built AI-powered automation workflows and AI-agent integrations (n8n, LLM APIs) to reduce manual operational work, delivering 3 production automation flows and spending significant effort on LLM integration and prompt design.
- Troubleshoot and resolve production integration issues, tracing failures across APIs, webhooks, and databases (SQL and NoSQL).
- Collaborate through GitHub workflows — Issues, Projects, Pull Requests and code reviews — and communicate in English in technical contexts.

SELECTED PROJECTS

MyBlock — Rental Management Platform (Backend) github.com/Allisonfreittass/myblock-backend
Node.js, Express, MongoDB, Solidity, Hardhat, JWT

- Layered REST API (routes / controllers / services / middleware) bridging a MongoDB backend with Ethereum smart contracts for automated rental agreements.
- Implemented JWT + bcrypt authentication, scheduled cron jobs for contract-status updates, and Solidity contracts using OpenZeppelin (`ReentrancyGuard`, `Ownable`) with automated late-payment penalties.

Auris — Real-Time AI Assistant (Desktop) github.com/Allisonfreittass/AURIS
Electron, React, TypeScript, Python, faster-whisper, Anthropic SDK

- Desktop overlay that captures system and microphone audio (WASAPI loopback + VAD), transcribes locally with faster-whisper, and streams LLM responses via the Anthropic SDK (with prompt caching).
- Multi-process architecture with a supervised Python sidecar (auto-restart with backoff) communicating over IPC; security-hardened Electron (sandbox, context isolation, strict CSP, API key encrypted via Windows `safeStorage`).

TECHNICAL SKILLS

Languages	JavaScript, TypeScript, Python, SQL
Backend	Node.js, Express, REST APIs, Webhooks, JWT Authentication
Frontend	React, Vite, Next.js, Vue 3, HTML, CSS
AI & Automation	n8n, LLM integration (Anthropic, OpenAI), AI agents
Databases	PostgreSQL, MongoDB, SQL & NoSQL
Tools & DevOps	Git, GitHub (Issues, Projects, PRs, code reviews), Cloudflare (Workers, Pages), Hostinger

EDUCATION & LANGUAGES

B.Sc. in Computer Science 2022 – 2025
UNIS-MG (Centro Universitário do Sul de Minas) *Brazil*

Languages: Portuguese (Native) | English (Fluent)
